

### GENERAL EXPLANATIONS

This training set is designed for interior lighting and warning, show the working principle of the systems prepared for the purpose.

### TECHNICAL SPECIFICATION

All of the basic lighting and warning systems on the vehicle and working principle can be observed on the device. The supply of the system is 12V battery and the alternator and starter motor are also integrated into the system. In addition to basic lighting and warning systems, glass water sprinklers system and central locking system are also located on the device..

### TECHNICAL DETAILS

Experiment set frame is stainless and anti-scratch 45×45

It is produced from anodized coated aluminum profile.

3 meters of 3×1.5mm cable and security on the experimental set

There is 1 Phase+Neutral+Earth plug.

The products used are selected in accordance with the current technology.

Precautions are taken against electric shocks.

(fuse-leakage current-double isolated born-emergency stop button).

Industrial type terminals are used in all connections.

(+) and (-) poles of each electrical receiver experiment panel

(+) and (-) poles with scraping method is shown.

In the lower part of the experiment table, all the electricity is inside the protection cabinet.

There is a battery that can run the circuits at the same time and battery charger is also included with the set.

Thanks to its wheeled structure, the training set can be used in workshops and laboratories.

It is in a structure suitable for use, two of the wheels are fixed and two of them are fixed. is mobile.

Experiment Set includes (Experiment cables with clips and sockets, Spare lamp, Spare fuse, 12V 60A battery and other accessories etc.),,

### PACKAGE INCLUDED

Device, 1 test sheet, product catalog
