

GENERAL EXPLANATIONS

This training set is direct injection working principle of a gasoline engine made to show.

TECHNICAL SPECIFICATION

Direct Gasoline Injection, fuel injection that sends it to the combustion chamber system. Multi-point fuel injection (MPI) Each cylinder, like an engine equipped with There is a separate fuel injector for Explosive The air-fuel mixture pushes the piston down. generates heat and pressure.

TECHNICAL DETAILS

Direct Injection System Kit complete with all components exists.

It should be suitable for 4-stroke, 4-cylinder engines.

ECU – EOBD II socket and on the instrument panel exists.

All parts are on and in working condition. The system is running and its operation can be observed.

There is a control panel on the coffee table. It is driven by an electric motor.

Moving parts are visible.

It is manufactured in accordance with occupational health and safety measures.

PACKAGE INCLUDED

Device, 1 test sheet, product catalog
